

Zinc Sulphate Hydrometer

Instructions for Use:

You will need:

- Your Hydrometer
- A measuring cylinder (or small vessel)

Process:

1. Fill your measuring cylinder with a sample of water from your footbath
2. Lower the hydrometer into the sample, pressing it down slightly
3. Let go of the hydrometer and allow it to rise
4. Once the hydrometer has settled, view it from eye-level and take a reading from the bottom of the meniscus (dip) in the water level

You are looking for a concentration of **10%** with Zinc Sulphate footbaths.
