

Cow Lifter Belly Strap

Features:

- For use with Shoof's Quick-Lift, quick release hip clamp device
- Designed in alignment with best practise guidelines
- Quality tear-proof PVC sling with strong, webbing reinforcement
- Enhanced animal comfort and safety

Product Information:

The Cow Lifter Belly Strap has been developed and manufactured at Shoof International Ltd to assist when lifting a cow with a hip clamp device. Whilst the clamp lifts the rear of the cow, the belly strap can be used behind her front legs for more comfortable lifting. The strap is 2.4m keeper-to-keeper, and has 20cm-wide belly support. A practical way to use this strap is with the hip clamp on one side fork, the strap is used on the other side, with a connecting chain of the right length. (The cow will be cross-ways to the tractor).
